SUMMARY

I'm a full-stack engineer who turns manual business processes into production software. I started in frontend in 2022, moved into Python backend and telecom, and now design and ship whole products on my own: domain model, backend, UI and infrastructure. My focus is **LLM automation**, **VoIP / WebRTC** and **crypto payments**.

2022 · Frontend — React, Next.js
2023 · Python backend — SMS, GSM, telecom APIs
2025 · Data & pipelines — CDC, Kafka, energy trading
2026 · End-to-end — LLM, VoIP, crypto products

EXPERIENCE

Full-Stack Engineer (contract) · Telecom & VoIP carrier, Athens — Feb 2026 – Present

- **LLM email automation.** Staff used to read trading email and re-key everything by hand. I built a 3-stage LLM pipeline (Claude, NVIDIA NIM) that classifies every inbound email and turns supplier rate offers into structured deals. Data errors fell from 544 to 0.
- **AI invoice extraction.** Supplier invoices arrive as PDF or Excel. The model reads each page as an image and returns the header and line items in a strict JSON schema. Automatic checks (totals, VAT, IBAN, dates, duplicates) and CRM matching approve clean invoices on their own and send the rest to a review app for finance. 800+ invoices processed.
- **Treasury "Liquidity Board".** A payment-planning module built on an append-only journal, so the same invoice can't be paid twice.
- **VoIP self-service platform.** Customer and staff portals over a closed-source billing system, built without touching its code: a browser softphone (WebRTC via Kamailio + rtpengine), a Telegram bot, USDT top-ups and one-command white-label rollout with Ansible.
- **AML risk engine for TRON/USDT.** Traces tainted funds through the transaction graph, detects address poisoning and scores risk against sanctions lists. Sold via API, Telegram bots and the web.
- **USDT reconciliation app.** A Go desktop app that matches on-chain payments against the ledger.
- Sole engineer on all four products, production operations included.

Python · Django/DRF · Channels · Dramatiq/RabbitMQ · PostgreSQL · React/TS · Next.js · Go · Kamailio · Ansible

Backend Engineer (contract) · Energy-trading platform — Oct 2025 – May 2026

- Battery-storage and energy-trading platform for the European power market, built by a team of 3. I built the ingestion of market prices, metering data and battery state, the energy-order workflow, and the CI and Docker setup.

Django · Dramatiq · InfluxDB · LightGBM · OR-Tools

Python Backend Engineer (contract) · SMS & telecom platform — 2023 – 2026

- **AI agent for telecom hardware.** A LangGraph agent, also exposed as an MCP server, that discovers GSM modems, reads SIM cards and runs USSD and SMS operations with a human approving each step. It onboards SIM cards from a photo, reading ICCID and PIN from the image.
- **Real-time CDC.** A MySQL → Debezium → Kafka → Python pipeline that streams a legacy SIM-bank system into the platform.
- Started with SMS-provider integrations and admin tooling, then moved on to the GSM modem gateway (AT/USSD).

Django · PostgreSQL · Redis · Kafka · Debezium · SMPP · LangGraph · MCP · Docker

Web Developer (contract) · UK construction company — 2024 – Present

- Built the company website in 2024. The client came back in 2026 for a redesign: UI library upgrade, SEO and structured data, a cost estimator, and a move to Server Actions. I still maintain the site.

Next.js · React · TypeScript · MUI

Frontend Developer (part-time) · HR-tech startup — 2022 – 2023

- Live coding interview platform: candidates solve tasks in a shared editor during a video call and get scored.

React · Next.js · TypeScript · MobX · GraphQL

EDUCATION

Athens University of Economics and Business
Bachelor, Computer Science (Dept. of Informatics)

LANGUAGES

Russian (native) · Greek (native-level) · English (reading)

SKILLS

Core	Python, Django/DRF, FastAPI, PostgreSQL
AI	Claude, NVIDIA NIM, LangGraph, MCP
Frontend	TypeScript, React, Next.js
Telecom	SIP, Kamailio, WebRTC, SMPP, GSM
Crypto	TRON/USDT, on-chain analytics, Stripe
Data	Kafka, Debezium, Redis, RabbitMQ
Infra	Docker, Ansible, CI/CD, Go
